

INTRODUCTION TO CYBER CRIME.

1. Cyber space:

- In terms of computer science, cyber space is a worldwide network of computer networks that uses the Transmission Control Protocol/Internet Protocol (TCP/IP) for communication to facilitate transmission and exchange of data.
- It is a place where you chat, explore, research and play.

2. cyber squatting:

- cybersquatting is the act of buying internet domain names that match famous brands, usually with the goal of reselling them to the rightful owners for a huge profit or tricking people into visiting a fake website.

Example:

Someone registers a domain name with a common typo like ^{fake website} Facebook.Com instead of ^{real website} Facebook.com, hoping users make a mistake and visit their page to view ads or steal passwords and demands the real company owner to pay thousands of dollars to buy it.

Why it's a problem:

- It harms both businesses and everyday users by causing confusion, spreading scams, and ruining a brand's reputation.

3. cyberpunk:

- Cyberpunk is a high-tech world with low-quality life.
- Cyberpunk was to invent a new term that will express Juxtaposition of punk attitudes and high technology.

Juxtaposition: Keeping two different things side-by-side to highlight the differences or show surprising effects.

4. Cyberwarfare:

- Cyberwarfare is using digital attacks by one country to damage or disrupt another country's computers and vital networks. It is war fought with code instead of bombs.

Targets:

- power grids to shut off electricity
- Bank systems to freeze financial markets
- Government networks to steal secret intelligence
- Military communications to disrupt defenses.

5. Cyberterrorism:

- Cyberterrorism is the use of cyberattacks by non-state groups to scare people, cause panic or advance political and religious goals.

Targets:

- public utilities like water treatment plants or power grids to cause mass fear
- Emergency services like disabling emergency service systems to trap people without help.
- Transportation networks like hacking air traffic control to cause accidents
- media outlets to hijack broadcasts and spread terrifying propaganda.

Cybercrime (computer crime):

- A crime ^{conducted} in which a computer was directly and significantly instrumental.
- Cyber crime is any illegal behaviour, directed by means of, electronic operations, that targets the security of computer systems and data processed by them.

⇒ Types of Attacks:

1. Techno-crime:

A premeditated act against a system or systems, with the intent to copy, steal, prevent access, corrupt or otherwise deface parts of or the complete computer system.

2. Techno-Vandalism:

These acts of "brainless" defacement of websites or other activities such as copying files and publicizing their contents publicly, are usually opportunistic in nature.

- ⇒ Cybercrimes differ from most terrestrial crimes in 4 ways:
- a. how to commit them is easier to learn
 - b. they require few resources relative to the potential damage cause
 - c. They can be committed in a Jurisdiction without being physically present in it
 - d. they often not clearly illegal

⇒ Internet:

- Internet is one of the means by which the offenders can gain priced sensitive information of companies, firms, individuals, banks and can lead to intellectual property (IP) crimes selling illegal articles.
- This is done using the methods:
 1. phishing
 2. Spoofing
 3. Pharming
 4. Internet phishing
 5. wire transfer...etc.

Cybercrime and Information Security.

Cybersecurity:

- protecting information stored in devices or computers from unauthorized access.

⇒ The Botnet Menace

• Botnet:

It is used to refer to a group of compromised computers (personal computers secretly under the control of hackers). running malwares under a common command and control infrastructure.

- A Botnet maker can control the group remotely for illegal purposes, the most common being denial-of-services attack (Dos attack); Adware, Spyware, E-mail spam, click fraud, theft application serial numbers, login ID's and financial information such as credit card numbers etc...
