

Who are cybercriminals?

Cybercriminals:

A cyber criminal is any individual or member of an organized group who uses computers, networks or digital devices to commit illegal activities.

→ Stealing another's Identity to perform criminal act.

→ Cybercriminals are categorized into three groups:

Type-1: Hungry for recognition:

These are unskilled individuals who use pre-made hacking tools to launch cyberattacks, primarily motivated by curiosity, thrill-seeking or online recognition rather than financial gain.

Type-2: not interested in recognition:

An individual or member of organizations who uses digital exploits to steal money, data or intellectual property for economic gain, actively avoiding public recognition.

Type-3: The insiders

An insider is a trusted person within an organisation like an employee or contractor - who causes digital harm to the company using their existing access to its system.

⇒ E-Mail Spoofing:

A Spoofed email is one that appears to originate from one source but actually has been sent from another source.

⇒ Spamming:

Spam is an abuse of electronic messaging system to send unwanted unsolicited bulk messages repeatedly to a large number of people.

⇒ Cyberdefamation:

Cyber defamation is the act of publishing or spreading false, harmful statements about an individual or organization using digital platforms, such as social media, emails, websites, with the intent to damage their reputation.

Internet: A New Fuel for defamation;

- Libel — written defamation.
- Slander — oral defamation.
- When determining whether or not defamation has taken place, the only issue to consider whether a person of ordinary intelligence in society would believe that the words would indeed injure the person's reputation.
- Even if there is no damage to a person's reputation, the person who made the allegation may still be held responsible for defamation.

⇒ Law of defamation:

The law on right to an unimpaired reputation and the right to freedom of expression.

Internet time theft:

- Theft occurs when an unauthorized person uses the internet hours paid for by another person.

Salami Attack / Salami Technique

- These attacks are used for committing financial crimes.
- The idea here is to make the alteration so insignificant that in single case it would go completely unnoticed.

Example:

A Bank employee inserts a code in Bank Server, that deducts small amount from every customer's account, No account holder will probably notice this unauthorized debit.

Data Diddling

A Data Diddling attack involves altering raw data just before it is processed by a Computer and then changing it back after the processing is completed.

Forgery:

- These are made using computers and high quality scanners and printers.
- Counterfeit currency notes, postage and revenue stamps, marksheets etc. can be forged using sophisticated computers, printers and scanners.

Web Jacking:

- Web Jacking occurs when someone forcefully takes control of a website (by cracking password and later changing it).
- The first stage of this crime involves "password sniffing".

Newsgroup Spam / Crimes Emanating from Usenet News Group

- The Advent of Google groups, and its large usenet archive, has made usenet more attractive to spammers than ever.
- Spamming of usenet newsgroups actually predates E-Mail Spam.
- The first widely recognized usenet spam titled "Global Alert for All: Jesus is coming soon".
